Exposé du jeudi 02 février 2012

RATIONAL POINTS ON A CERTAIN INTERSECTION OF TWO QUADRICS.

DANIEL LOUGHAN (JUSSIEU)

Résumé : In this talk we count the number of rational points of bounded height on a certain intersection of two quadrics in five variables. This is a singular del Pezzo surface of degree four, and the results we obtain are in line with Manin's conjecture on the number of rational points of bounded height on projective varieties.

¹Les jeudis matin, de 10 h 30 à 11 h 30, salle 004, IRMAR (bâtiment 22), Université de Rennes 1, Campus de Beaulieu
